

ZETOLAN-MEK Plus

*100% concrete-compatible – 100% machine-friendly
and therefore not comparable with any previously used product or protective agent*

Test results overleaf

with the MEK Plus-Formula

- Well maintained equipment/trucks last longer= your investment is more profitable long term !*
- Machines/trucks maintained with hammers.....= leads to breakdowns !*
- Clean and maintained mixers and trucks.....= makes for the best quality concrete !*
- Shorter cleaning times= longer production times !*
- Chloride free products.....= no risk of corrosion !*
- Clean, reliable, solvent-free products.....= greater job safety !*
- Top class biodegradability.....= environmentally friendly !*
- Clean work places.....= high morale and motivation of your staff !*
which shows higher profits

ZETOLAN®-MEK

- Protects mixers and concrete equipment from the adhesion of concrete
- Cuts cleaning time dramatically = lower labour costs
- Longer service life of the machinery due to better care
- Contains no dangerous solvents or heavy metals
- **Certified by the Hygiene Institut Gelsenkirchen: „highly biodegradable“**

Other products may do the job but at higher labour costs, higher consumption rates, higher maintenance costs, higher risk factors.

With the MEK Plus formula, you seriously reduce cleaning time. An easy win for the intelligent cost accountant

ZETOLAN-MEK Plus has been developed through close teamwork with our successful partners in the construction industry. Profit from the positive experience of your industrial partners or your competition!

ZETOLAN-MEK Plus is the new protection and maintenance system

It is not comparable with the old method of mixer protection procedure when first thing in the morning a liberal dose of cutting oil is applied which is mostly removed by the first mix of concrete. That's how effective that method proves to be. ZETOLAN-MEK Plus, after the end of the working day - usually in the evenings - after the normal cleaning procedure with water, is applied direct on to the surface while it's still wet. The water runs away and now begins the ZETOLAN-MEK Plus night shift.

The effectiveness of the system for the protection and removal of concrete for cleaner equipment exposed to concrete contamination

ZETOLAN-MEK Plus is active on hard existing concrete deposits but harmless to fresh concrete. (Test certificate available). The active component in the MEK Plus formula penetrates the capillaries of the hardened concrete and breaks them down, layer by layer, millimetre by millimetre with a daily spraying, effective in days or sometimes weeks. ZETOLAN-MEK Plus dissolves existing concrete in this way and at the same time protects and maintains.

The equipment becomes and remains clean !

The economics

The time consuming and hitherto aggressive concrete removal methods like "Hammer washing" etc. are no longer necessary. Plant and trucks no longer need be damaged by crude methods. Entirely abolishing the use of acid products, cleaning becomes a gentle art. By this money-saving practice the adhesion of concrete on mixers, trucks and re-cycling storage is averted. Cleaning times are reduced to a fraction! Generally the required time for cleaning will be reduced by a half to a third

Test certificates from the Hygiene-Institut des Ruhrgebietes, Gelsenkirchen and the Baustoffpruefzentrum Rheinland and MSDS forms can be accessed on: www.leyde.com
We can also send them at your request.

LEYCO- MV 7 SPRAY PUMP

The effective sprayer technology to minimise consumption

LEYCO MV 7 "airless" fine sprayer with time saving spray

The fine spraying equipment is pre-mounted on the delivery barrel and makes for a considerable saving in time.

As a general rule the job is effectively done in a mere 2 – 3 minutes.

The economics

Significantly reduced, targeted consumption.

ZETOLAN-MEK3 is applied precisely where it belongs – to prevent the adhesion of concrete and to protect surfaces and mixer equipment, concrete trucks or pumps!

Time saving

The gain over usual methods, which take 15 – 20 minutes. This is easily calculated in Euros.

Workplace and environmental safety

Due to the airless pump spray action, no aerosol mist is produced. It is very significant that the Workplace Protection Code is in general very seldom followed one hundred percent. Un-noticed spillage of the product due to the fixed assembly of the spray apparatus is not possible.

Service and special purchase terms

We carry out the installation, putting the equipment into service and training work operatives. **Moreover we offer you our budget purchase price, which is 40% below normal trade price.**

ZETOLAN-MEK Plus = A WIN! WIN! WIN! SITUATION

1. WIN for your company

- Excellent price/value comparison
- **Cuts cleaning time dramatically**
- **Excellent biologically degradable properties**- thus no problems with the environment protection authorities, Health and Safety Executive, and most importantly with water resources protection regulations.
- Due to visibly bright and clean lorries, plant and equipment you gain the best image with clients. 'Quality concrete in quality packing'. This was your aim when you designed the logo and colours for your company's image as the flagship in the market.
- **Lower personal risk** – because the Company Managers are personally responsible for work place safety and the implementation of the Code relating to the Federal Water Act.

2. WIN for your operational staff and delivery personnel.

- **No more spraying first thing in the morning:** start the day without 'a nose full' of oily spray and save half an hour too!
- **ZETOLAN-MEK Plus** contains no dangerous solvents or heavy metals which are a hazard to health and most batchers unknowingly inhale - why do their eyes smart and their lungs wheeze? Because safety masks are not often worn, even if provided.
- **More satisfaction** in the workplace with clean plant, pumps and lorries. It brings out the best in the staff and leads to pride of workmanship and a well run establishment, proof that management cares for the conditions in which people work.

3. WIN for your valuable investment

- No damage to the mixing plants and lorries caused by the great "hammer cleaning" method - resulting in peeling paintwork and dented plating - and still the concrete sticks even better !
- Improves maintenance and lubrication giving a longer life for your machines resulting in a higher return.
- LEYDE products have been developed over more than 40 years and hold a pre-eminent place in the concrete industry

Stop using old methods and products, and let professional LEYDE products do the work they do best, so you can get on with the work that you do best: Producing concrete !

ZETOLAN-MEK Plus – the formula for all mixer types and ready mix trucks

Whosoever follows in another's footsteps will never overtake"

(Old saying)

Our customers are giving delighted reports of dramatic time savings from using ZETOLAN-MEK Plus.

Reduce cleaning time by even just half-an-hour and you have already saved about CHF 25 per day per person involved.

ZETOLAN-MEK Plus is 100% concrete-compatible and especially kind to seals, insulation and plastic parts. This cannot be taken for granted in all products. Unsuitable products result in considerable subsequent costs.

Here for example the results of tests carried out at LIEBHERR AG in Switzerland:

Rubber 5 mm thick and 88.5 mm long was immersed for 21 days in each of the products listed below.

The dimensional changes due to swelling/deformation may be seen in the table.

| Supplier | Product name | Length (mm) | Difference (mm) | Difference (%) |
|----------|------------------|-------------|-----------------|----------------|
| | Original length | 88,5 | 0,00 | 0,000 |
| MB. | Rh...finish 2... | 97,3 | 8,80 | 9,944 |
| MO.....X | S.turn 6.. | 98,6 | 10,10 | 11,412 |
| P...TECH | Pa...ol 6.. | 101,3 | 12,80 | 14,463 |
| BL...ER | Mischerschutz | 102,6 | 14,10 | 15,932 |
| SI.. | Mischerschutz | 104,2 | 15,70 | 17,740 |
| LEYCO | ZETOLAN-MEK 3 | 94,0 | 5,50 | 6,215 |
| LEYCO | ZETOLAN-MEK Plus | 92,0 | 3,50 | 3,954 |

We are proud of the result since it vindicates our rigorous quality-oriented product policy.

Please realistically check your expenditure on replacing gaskets and other rubber seals and the cost of production stoppages. Customers who have offset the costs resulting from unsuitable products against the use of ZETOLAN-MEK Plus have found themselves substantially in credit thanks to using our product. Act now!
